Lab 2: Agile Backlog Creation & Sprint Simulation — Faculty Research Grant & Publication Tracker

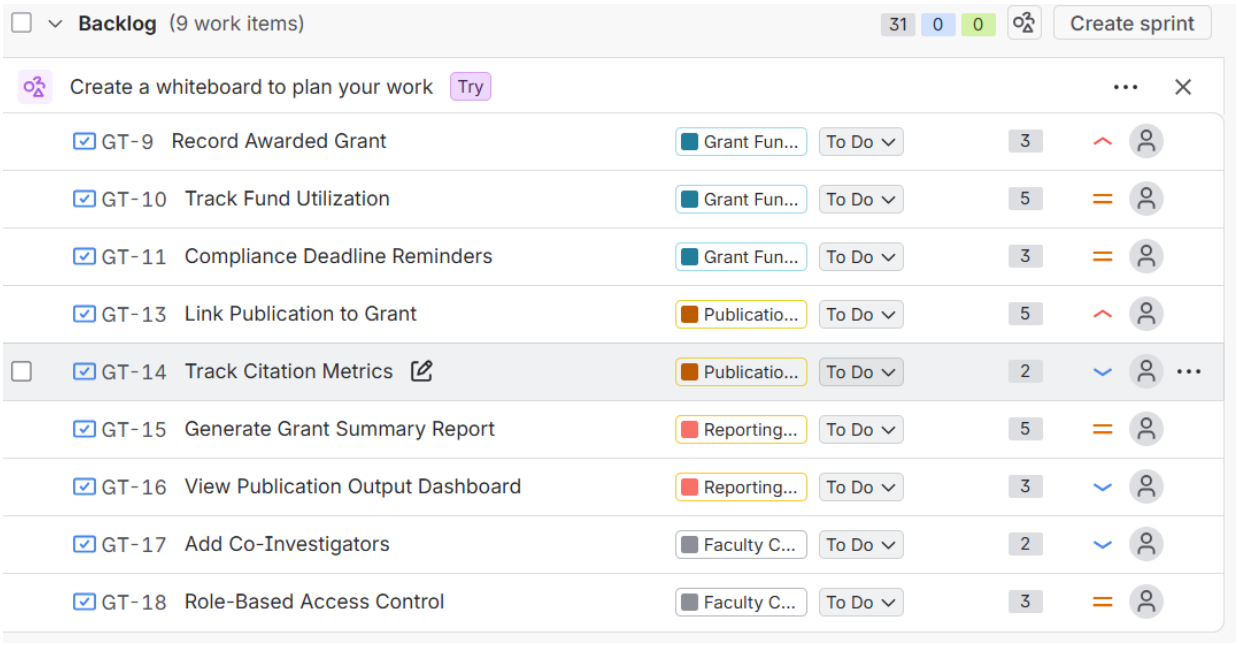

1. Backlog — Epics and User Stories

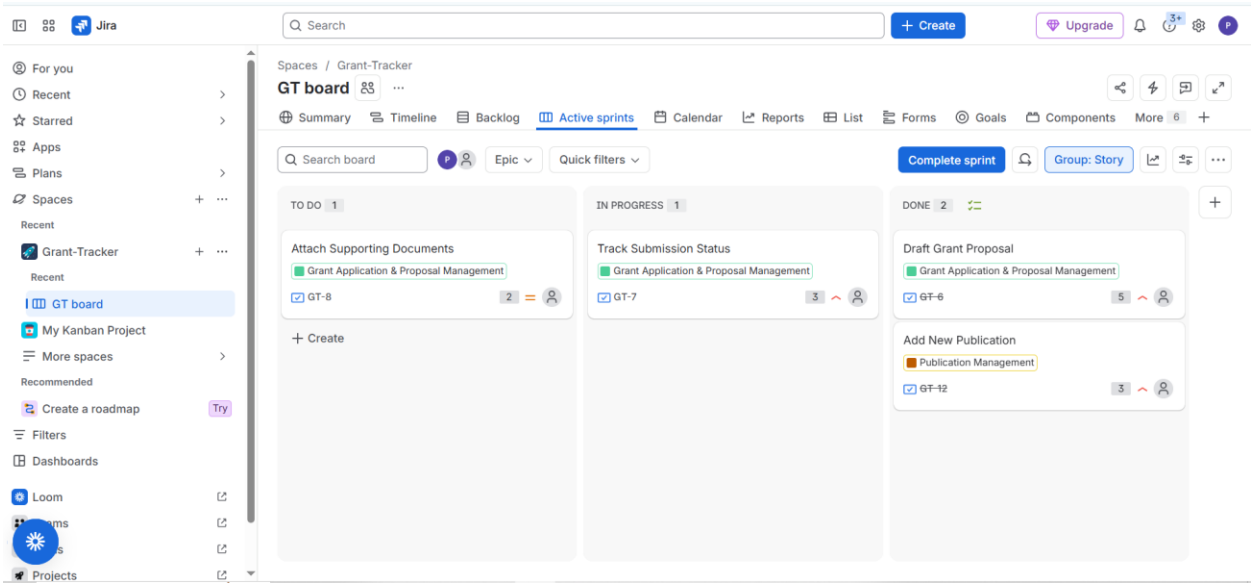

2. Story Point Assignments

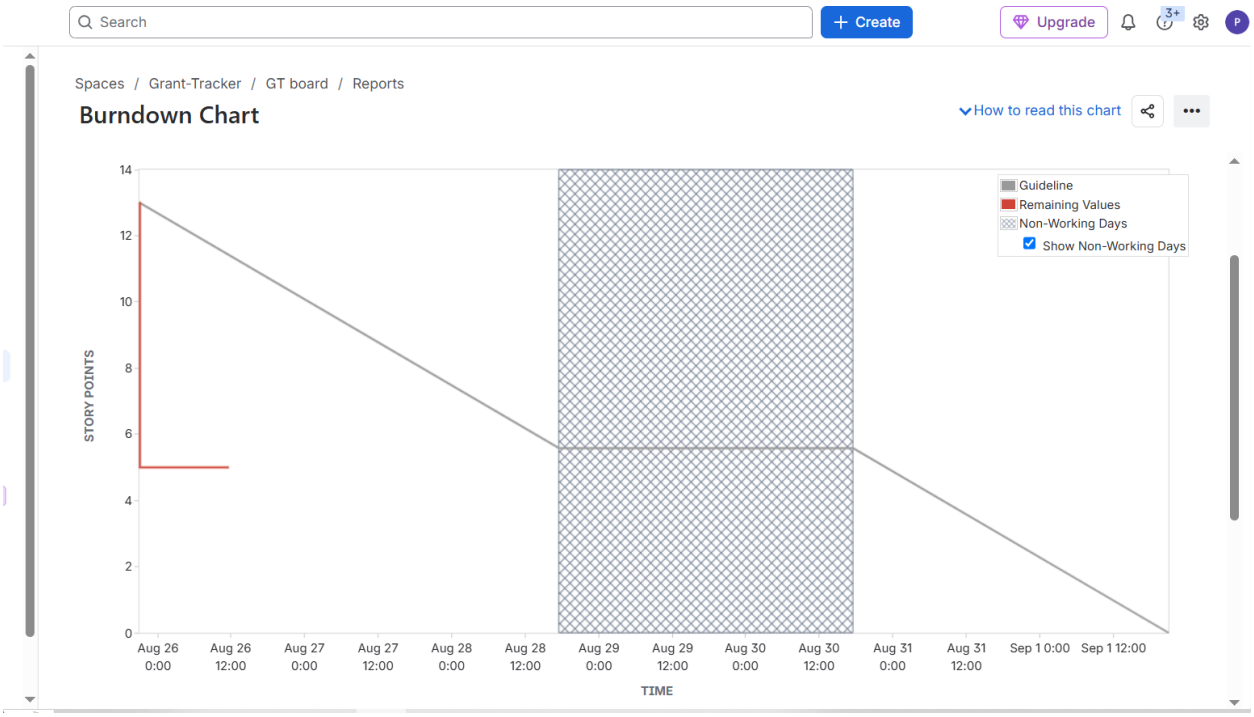

3. Sprint Board — Active Sprint View

4. Burndown Chart

				Story Points		
Date	Issue	Event Type	Event Detail	Inc.	Dec.	Remaining
25/Aug/26 9:01 PM	GT-12	Sprint start		3		
	GT-6			5		
	GT-7			3		
	GT-8			2		
	Total					13
25/Aug/26 9:05 PM	GT-6	Burndown	Issue completed		5	8
25/Aug/26 9:06 PM	GT-12	Burndown	Issue completed		3	5

Reflection Questions — Faculty Research Grant & Publication Tracker

1. Did your estimations reflect the actual effort?

Overall the story points felt reasonable for a first-pass estimate. Stories with more moving parts, like linking a publication to its funding grant (5 points) and tracking fund utilization (5 points), genuinely involved more fields and logic than simpler stories like attaching documents (2 points). If I re-estimated after building it, I'd

probably bump up "Track Submission Status" slightly, since status transitions (Submitted → Under Review → Approved/Rejected) added more complexity than the 3-point estimate suggested.

2. Was your backlog well-prioritized?

Yes — High priority was reserved for the core proposal and publication workflow (drafting, submitting, tracking status, adding publications, linking them to grants), since those are the minimum viable features a faculty member needs. Medium priority went to supporting features like fund tracking and compliance reminders, and Low priority went to nice-to-haves like citation metrics and role-based access, which aren't essential for a first release.

3. How did your simulated sprint align with your plan?

Sprint 1 was planned at 13 story points across 4 stories (Draft Grant Proposal, Track Submission Status, Attach Supporting Documents, Add New Publication). During the simulation, I moved 2 stories to Done and 1 to In Progress, leaving 1 in To Do — a realistic mid-sprint snapshot rather than everything finishing instantly, which mirrors how work actually trickles through a sprint.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart's guideline line assumes steady, linear progress across the week. Since a chunk of the points were completed early (moving 2 higher-point stories to Done right away), the remaining-values line dropped faster than the guideline at first. In a real team setting, this pattern would be worth watching — if it happens every sprint, it could mean the team is either finishing easy items first and saving harder ones for later, or that the sprint was slightly under-scoped for a full week's capacity.
